Example Dialogue

- Hey. Where would you like to climb?
- I would like to climb in California
- Where are you located right now?
- I'm in LA
- What grade do you usually climb?
- In the gyms I mostly climb V5s
- You should check out this *Master of Reality* boulder

GraphQL playground

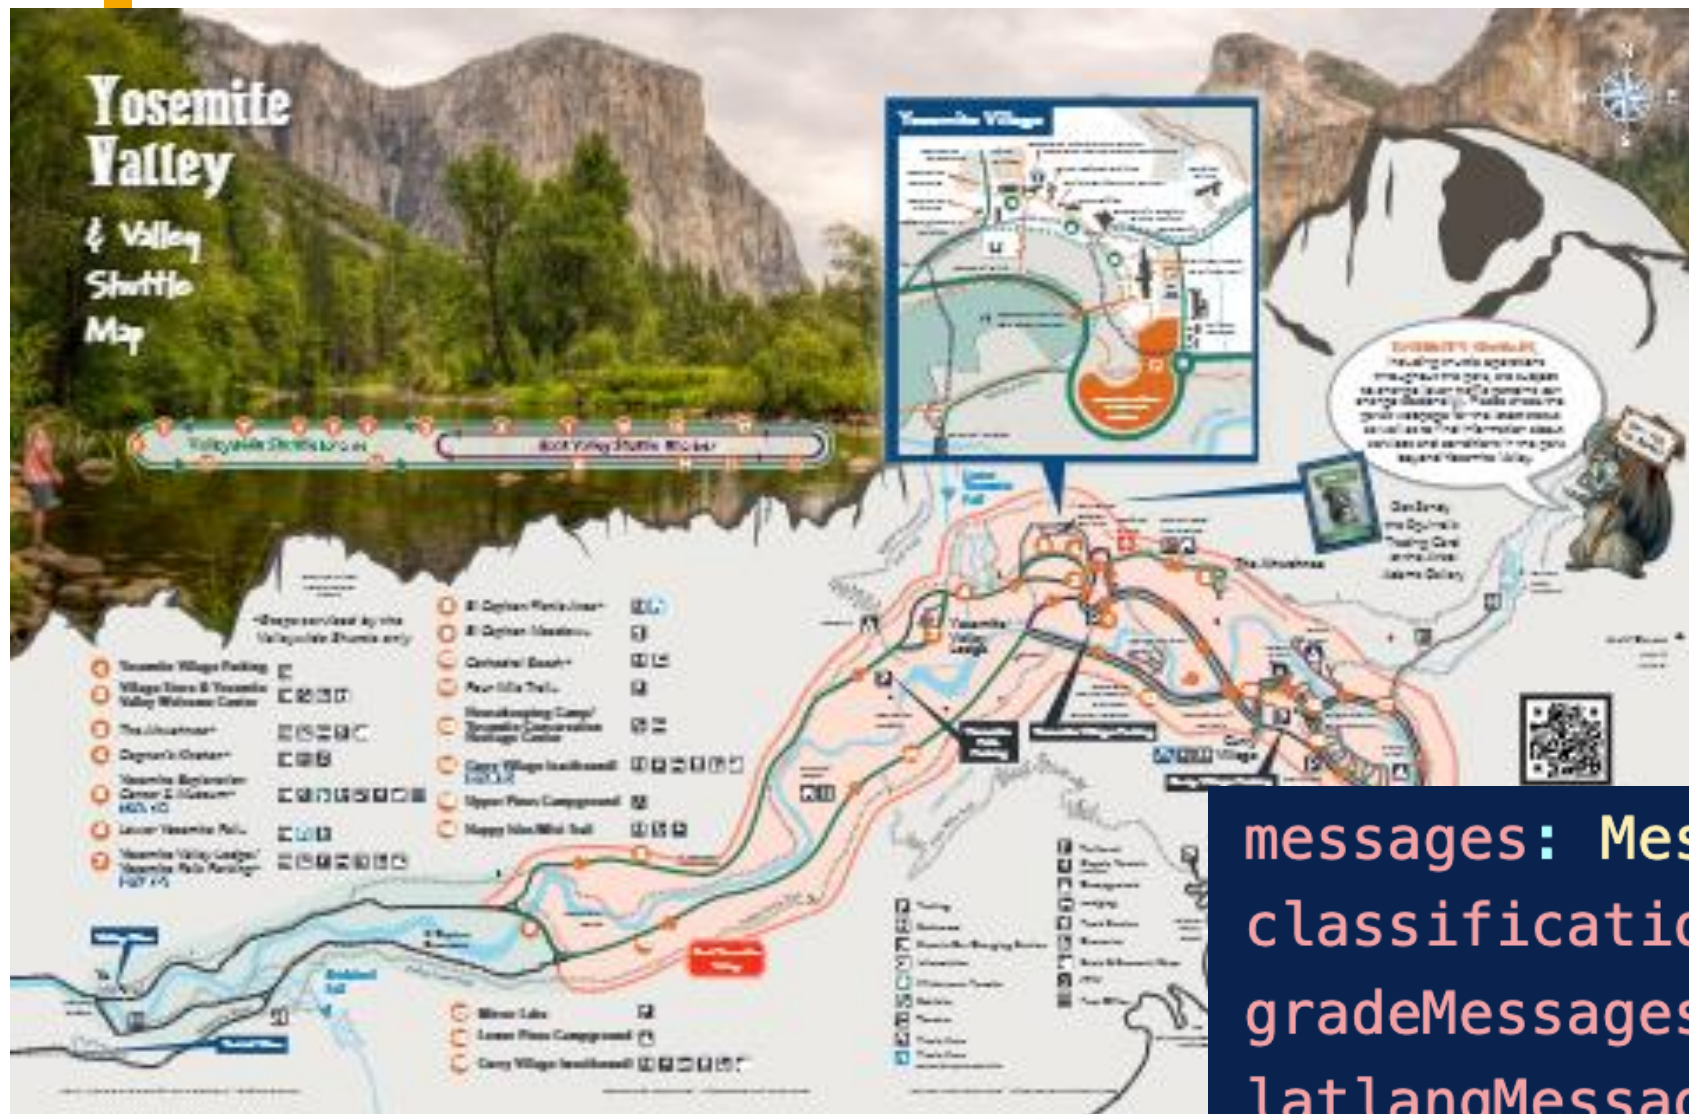

The screenshot displays the GraphQL Playground interface with three main panels:

- Explorer:** A tree view of the query structure. The 'filter' section is expanded, showing 'area_name' with 'exactMatch' unchecked and 'match*' checked. The 'match*' value is set to '/* Yosemite Valley Bouldering'.
- GraphiQL:** The query editor showing the following query:

```
1 query MyQuery {  
2   areas(filter: {area_name: {match: "/* Yosemite Valley Bouldering"} {  
3     area_name  
4     children {  
5       area_name  
6       climbs {  
7         name  
8         grades {  
9           vscale  
10          font  
11        }  
12        metadata {  
13          lat  
14          lng  
15        }  
16      }  
17      children {  
18        area_name  
19        climbs {  
20          name  
21          grades {  
22            vscale  
23            font  
24          }  
25          metadata {  
26            lat
```
- JSON:** The resulting JSON data, which is a list of area objects. The first object is expanded, showing details for 'Yabo Area':

```
{  
  "data": {  
    "areas": [  
      {  
        "area_name": "/* Yosemite Valley Bouldering",  
        "children": [  
          {  
            "area_name": "Yabo Area",  
            "climbs": [  
              {  
                "name": "Yabo Arete",  
                "grades": {  
                  "vscale": "V9",  
                  "font": "7C"  
                },  
                "metadata": {  
                  "lat": 37.72702,  
                  "lng": -119.62875  
                }  
              },  
              {  
                "name": "Yabo Roof",  
                "grades": {

Counting distance

Pythagoras

$$a^2 + b^2 = c^2$$

$$(x_2 - x_1)^2 + (y_2 - y_1)^2 = c^2$$

	V15	9A
	V16	8C+
BURDEN OF DREAMS	V17	9A

SPORTROCK SR CLIMBING CENTERS	YDS (Yosemite Decimal System)	FRENCH (a,b,c's)
BEGINNER (Perfect for beginners. These climbs will primarily contain jugs but will increase in difficulty of movement.)	5.2	1
	5.3	2
	5.4	3
	5.5	4
	5.6	5a
	5.7	5b
	5.8	5c
INTERMEDIATE (Climb on! These climbs are difficult to define as the holds and movement will vary. It is around here that we see holds get smaller and movement get more interesting.)	5.9	6a
	5.10a	6a+
	5.10b	
	5.10c	6b
	5.10d	6b+
	5.11a	6c
	5.11b	6c+
	5.11c	7a
	5.11d	7a+
	5.12a	7b
ADVANCED (Now we're getting there! These Climbs require a ton of climbing experience and strength. You will probably only see a handful of crushers on these routes at the gym.)	5.12b	7b+
	5.12c	7c
	5.12d	7c+
	5.13a	
	5.13b	8a
	5.13c	8a+
	5.13d	8b
PRO (This level of climbing is at the cusp of our sport. These climbs will only be found outdoors and at top level comps.)	5.14a	8b+
	5.14b	8c
	5.14c	8c+
	5.14d	9a
	5.15a	9a+
	5.15b	9b
	5.15c	9b+

Strict prompting

Your task `is` classification.

1. Ask the `user`: "What climbing grade do you usually climb?"
2. When the `user` answers, `return` `**exactly one grade**` chosen `from` this li

Rules:

- Output `only` the grade.
- `No` sentences, `no` explanations, `no` punctuation, `no` markdown.
- If unsure, choose the closest grade.

Future development

- More areas available
- No forced interpretations
- User is able to ask about other boulders in the area
- Less hallucinations
